

To whoever it may concern,

I know Wei Hao in the capacity as the project manager of the project that he was attached to us on. He was doing freelance work from May 2016 to August 2016, and then again from May 2017 to August 2017.

When he first approached us, I was quite skeptical of the product and solutions that he was supposed to bring to the table, due to the complexities and detailed understanding required to do things. However, he could study the problems we were facing and with a bit of guidance from our side, he was able to quickly come up with an innovative solution to save us significant time on our development phase.

Wei Hao has a unique perspective unlike any I've seen. He brings a refreshing change and a fresh perspective to the company. Despite having no prior professional experience, he displays maturity and a staunch willingness to learn. Apart from that, he completes his work far ahead of time and it is of the highest quality. He is flexible, adaptable and a quick learner. He adds value to the work that we do. Despite ending his commitments with us in August 2016, he was still willing to come back and continue maintenance and other work in May 2017.

I strongly recommend Wei Hao to the any position related to tech. He proves to be an asset to any team that he is on. I believe that his soft skills will be the most valuable asset he can offer and that he will bring great success to the cause he is in.

Damien Cheok  
Assistant Project Manager  
Kydon Learning Systems Institute Pte. Ltd.

To whom it may concern,

I was Wei Hao's team advisor for NUS Computing's Orbital project.

His Orbital project was about bringing the process of discovering and purchasing products much quicker. I found it to be extremely innovative and had strong business potential. Their project was relatively technically challenging. However, the most impressive aspects about the project were the clean user interface and appealing user experience. It was evident that UI and UX were very carefully thought through and I found it to be impressive.

Wei Hao's team was very self-driven, they completed their project ahead of schedule. With the scope that they were proposing, I was very sure that they would require a lot of advice or stumble, but they were self-sufficient and probably figured out most things on their own. I believe this demonstrates their resourcefulness and keen desire for knowledge.

I truly believe that their project truly demonstrates Wei Hao's self-independence and ability to self-learn. I strongly believe he is a strong candidate for the NOC programme.
